Introduction

Exercise Breaks is a classroom physical activity program designed to provide children the opportunity to engage in daily fitness activities. Good health habits include regular exercise.

Good health habits, including a positive attitude toward regular physical activity, instilled during childhood, are likely to carry over into adult life.

Research has shown that 60 minutes of physical activity, accumulated throughout the day in short bouts, can have important effects on health. It is not necessary to exercise strenuously for extended periods of time to benefit.

Short periods of moderate intensity activity, akin to the way children normally play, are also beneficial.

Exercise Breaks

- are short in duration, lasting 2-5 minutes, or more
- are composed of simple activities, that can be led by students as well as teachers
- are appropriate for limited space, like the classroom
- can be taken any time during the day

One to two exercise breaks, held daily in school, will contribute significantly to the goal of a total of 30 minutes of activity each day for every child. One five-minute exercise break per day can provide as much activity as one additional PE class per week.

Benefits of Regular Exercise

There are numerous physical and psychological benefits of regular physical activity, including:

- optimal growth of heart, lungs, muscles, bones and other tissues
- maintenance of healthy levels of body weight and body fat
- improved muscle and joint flexibility, muscle strength and endurance, and aerobic capacity
- stress reduction and improved psychological well-being
- enhanced self-esteem

Regular activity stimulates the brain as well as the body. Research has shown that children who are physically active are more alert and receptive to learning. A well-timed exercise break can reduce restlessness, bring children back on task, and make for a more effective learning environment.

Objectives and Goals

Objectives:

- to promote enjoyable physical activity
- to develop a positive attitude toward physical activity
- to increase daily energy expenditure in physical activity

Goals:

- 1-2 Exercise Breaks every school day
- minimum of 5-10 minutes of physical activity per day in exercise breaks

Using Exercise Breaks

To take an Exercise Break, simply pull an activity from the box and have fun! Most activities can be done at desk side. A few may require a bit more space. The space requirements, set-up and how to perform the activity are explained on each card.

Initially, use only 1-2 activities per break, and demonstrate each activity for the children. Once children have learned several activities, you can create combinations of activities to perform during a single break. Some examples of combinations (jade coloured cards) are included in the box.

As they master activities, allow the children to lead Exercise Breaks. You may wish to reward children who have worked especially hard with the opportunity to lead the day's break. This will make Exercise Breaks special, build enthusiasm, and contribute to self-esteem.

Using Music

Children enjoy moving to music. Select upbeat music and use it in the following ways:

- to signal the beginning of the Exercise Break
- as background music during the break
- for starting and stopping an activity
- for pacing

Fitness Symbols

Symbols representing each of the four fitness components show which fitness benefits each activity offers. Use the symbols to find specific activities to improve the fitness component that is targeted for the day's Exercise Break.

represents muscular endurance

represents flexibility

represents cardio respiratory fitness

represents muscular strength

Combination Breaks

Combination Exercise Breaks are created from several activities performed during one break. “Combinations” can be created from several activities all designed to improve the same fitness component or from activities designed to improve different components of fitness.

Examples of “Combinations” are included in the kit. You may create new “Combinations” by selecting activities that work on different fitness components you wish to improve, e.g., stretching for flexibility, movements for aerobic endurance, and callisthenic-type activities to improve muscle strength and endurance.

Appropriate durations (approximate time) for each activity are given on the cards. Children may also create their own combinations. Allow them to work singly or in small groups to create a combination. They can then take turns leading their classmates through their creation.
